Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The following is a first action on the merits of application serial no. 10/606,757 filed June 27, 2003.

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Specification

2. The abstract of the disclosure is objected to because it contains more than 150 words. The abstract should contain 150 words or less. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen et al (6,022,929). Chen et al. discloses A control method for a premixed compression ignition internal combustion engine in which a gaseous mixture of an oxygen-containing gas and a fuel is compressed and self- ignited within a cylinder, wherein cyclohexene is mixed with the fuel to be supplied to said premixed compression ignition internal combustion engine, and the mixing amount of cyclohexene is changed according to the operating conditions of said internal combustion engine.

5. Regarding claim 2, wherein said premixed compression ignition internal combustion engine has first supply means for supplying a first fuel and second supply means for supplying a second fuel that contains cyclohexene and whose self-ignition delay time is set so as to be longer than that of said first fuel, and the supply amount of the first fuel supplied from the first supply means and the supply amount of the second fuel supplied from the second supply means are changed according to the operating conditions of said internal combustion engine.

Regarding claim 3, wherein the first fuel consists of fuels other than cyclohexene.

Regarding claim 4, wherein the supply amounts of the first and second fuels are changed respectively so that when said premixed compression ignition internal combustion engine is operated at higher loads, the ratio of said first fuel to all fuel supplied to said internal combustion engine decreases, and the supply amounts of the first and second fuels are changed respectively so that when said premixed compression ignition internal combustion engine is operated at lower loads, the ratio of said first fuel to all fuel supplied to said internal combustion engine increases.
